GeerrBear White Paper

"The Legend Begins Where Control Ends"

Version 1.0 — July 2025

1. Introduction: The Legend of GeerrBear

In the mythical land of Cryptopia, freedom is scarce, and laughter is banned by the dark forces known only as The Suits of Endless Control. But from the heart of Prosper Valley, a lone bear rises — sword in paw, coin in belt, and a cape trailing like a hero out of meme folklore. His name is Geerr.

GeerrBear isn't just another memecoin. It's a rebellion in digital form — a coin forged not for hype, but for fairness, humor, and community engagement. Born without presale. Launched without a rug. Designed to be held, collected, joked about — and perhaps, in time, used in off-chain tools that empower its holders. A no promises token, just meme it.

2. Vision & Philosophy: Fairness Above All

GeerrBear is built on one core principle: Fairness.

• No presales. No insider allocations. No rug pulls.
• Every coin that enters circulation does so in the light, with a clear and public purpose.
• The goal is to build trust through transparency — and let the community decide its fate.

We reject the traditional crypto traps of shady launches and early whale domination. Instead, GeerrBear promotes organic growth, open participation, and long-term vision.

3. Tokenomics: Forged in Cryptopia

Total Supply: 3,500,000,000 GBEAR

Allocation	Amount	Purpose
🔥 Burn Reserve through the crytopian flame within the Flameforge Vault – Tne Inferno Pit of lost coin	1,000,000,000	Locked for value-boosting burns at price milestones

🔵 Dev Lock ("Geerr's Oath Vault – Vault of Eternal Hibernation")	50,000,000	Locked to show long-term builder commitment
🌱 Genesis Drop	10,000,000	Initial fair launch supply
🌲 Cryptopia Wilds (LP)	1,440,000,000	Released manually, proceeds injected into liquidity pools
🌼 Cryptopia Wilds (LP Free)	1,000,000,000	Released manually without obligation

4. Burn Strategy: The Flameforge Vault

GeerrBear's deflationary path is governed by price milestones. As market value increases, supply decreases — fueling scarcity and enthusiasm.

Burn Plan:
- 100,000,000 GBEAR will be burned every time the market price reaches:
  - $0.10
  - $0.20
  - $0.30
  - $0.40
  - $0.50
  - $0.60
  - $0.70
  - $0.80
  - $0.90
  - $1.00

Total Burns: 1,000,000,000

Burns will be done from the Flameforge Vault – Tne Inferno Pit of lost coin, a public burn wallet visible to all. 0x45B68C0668cf2d068AAD6e4a0305881Bf348B035

5. Release Strategy: The Cryptopia Wilds

GeerrBear's supply will enter the market gradually and fairly via the Cryptopia Wilds — themed token releases spread across time.

Updated by Project Dev

- All releases are manual — not bound by locked smart contract cliffs.
- Proceeds from the first 1.44B tokens go straight into liquidity pools to strengthen trading depth.
- The remaining 1B tokens are released into the wilds, but not used for LP injection — instead released in stages for possibilities for expanding the world of GeerrBear.

There is no presale, no hidden mint, no surprise unlock. Only what Geerr chooses to share from the wild.

6. Liquidity Strategy: PancakeSwap Injection
To ensure reliable trading and stable growth:

- Liquidity will be added manually using proceeds from Cryptopia Wilds releases (1.44B GBEAR).
- Primary pairing: GBEAR/USDT on PancakeSwap
- Network: Binance Smart Chain (BEP-20)
- Wallet-to-wallet transfers will always use BNB for gas
- No dev-tied wallets benefit from LP liquidity. It's all for the coin.

LP injections are the foundation of a healthy market. That's why we build slowly and strongly.

7. Roadmap: The Path Through Cryptopia
- ⚔️ Phase 1: The Genesis Drop

  - Launch of token and initial 10M circulation
  - Website live
  - Logo and identity confirmed
  - Contract verification and listing applications

- 🐾 Phase 2: The First Wilds

  - Begin releasing tokens from 1.44B Cryptopia Wilds
  - Inject proceeds as LP on PancakeSwap
  - Community memes and social growth campaigns

- 🏰 Phase 3: Rise of the Bear

  - Lore expansion across maps, NFTs, posts
  - Finalize all visuals and world elements

- 🧪 Phase 4: Geerr's Tools

  - Launch off-chain tools (like the Guardian Watchdog)
  - Potential for creating lightweight ecosystem services for holders
  - Potential for laying ground work for dApps

- 🔥 Phase 5: Milestone Burns

  - Execute burns at each price target
  - Update community with public proof and ceremony
  - Push deeper into exchanges and community adoption

8. Lore Appendix

🐻 Geerr the Bear

A glowing-blue bear of mysterious origins, Geerr is a mythical protector of digital fairness. Wielding his legendary Coinblade and donning the Cape of Supply, he journeys across Cryptopia to rally collectors and meme warriors.

🧍 The Suits of Endless Control

The oppressive force of the old financial world. Their grip on Cryptopia's wealth was broken when Geerr escaped their influence — but they linger still in Shadowmountain Cove, plotting to regain control.

🌍 World of Cryptopia

- Prosper Valley – Capital of freedom and meme culture
- Shadowmountain Cove – The Suits' stronghold
- Rugpull River – A twisted waterway of betrayal
- Bearclaw Forest – Home to hidden meme allies
- Flameforge Vault – Where burns are forged
- Derp Dunes – Where forgotten tokens roam
- The Trumpet Ranges – Rally cry of allied tokens
- Chainbound Plains – For future tools and integrations
